ENVIRONMENTAL POLICY

TCA S.p.a is committed to performing its work in full compliance with the environment, in accordance with the current regulations, guaranteeing that all operations are carried out in accordance with compliance obligations, correcting any non-compliance related to these obligations. TCA strongly believes that the commitment to sustainable development not only represents a business ethics value, but also an important variable in the company management strategy.

For this purpose, TCA S.p.a, with regards to pollution preventive measures, strives towards guaranteeing the continuous improvement of its own environmental services, developing projects for the reduction of environmental impact and for a better usage of resources such as water, emissions and waste management.

In order to guarantee the compatibility between working activities, territory and environmental protection, continuous monitoring and control systems have been arranged, not only to guarantee the continuous compliance with the limits of current regulations in the environmental field, but also aiming at offering the best environment for the needs of man and nature.

Furthermore, complete availability regarding cooperation, involvement and environmental commitment with local organizations, territorial institutions, regulatory bodies, local communities and stakeholders in general, promoting a transparent and cooperative relationship in order to set up the most suitable protection and preventive measures.

Nowadays, in fact, only a commitment in the environmental industry can enable to satisfy two kinds of inseparable and complementary needs. On one hand, the need to respond completely to the complex market needs, offering clients products and services that are ever more compliant with their expectations. On the other hand, the need to intensify company commitment so that the working activities can be carried out at higher and higher levels of compatibility with territory and environmental safety.

TCA is continuously oriented towards the definition and achievement of the objectives that are periodically assessed during management reviews, and whose monitoring aims to continuously improve its environmental management system to then improve its own environmental performance.
